JOIN US FOR TWO DAYS OF EXCITING AND COLLABORATIVE ENGAGEMENT!

The goal is to foster greater communication and interaction between pancreatic islet cell biology investigators within the Midwest region. The meeting will be composed of both senior and junior investigators, with exclusively students, postdoctoral fellows and newly independent investigators serving as speakers. The exception is the keynote talk established in memory of the late Dr. Paul Lacy, who pioneered pancreatic islet isolation and transplantation in St. Louis.

2018 Lacy Medal Award Lecturers (all from the Washington University School of Medicine)

Michael L. McDaniel, PhD, Emeritus Faculty, Department of Pathology and Immunology,
Stanley Misler, MD, Emeritus Faculty, Department of Medicine,
John Turk, MD PhD, Alan A. and Edith L. Wolff Professor, Department of Medicine

Beginning with Mike’s collaboration with Paul Lacy in the late 1970s, Mike McDaniel, Stan Misler and John Turk formed a nucleus of researchers that drove islet research at Washington University from the 1980s onwards.

Any questions concerning the meeting at Washington University in St. Louis, please contact Paula Reynolds paula@wustl.edu or Colin Nichols cnichols@wustl.edu.
